## Introduction

The Greater Bay Area (GBA) has become the world's largest urban area. Consisting of Hong Kong, Macau and the nine cities of the Pearl River Delta, in less than forty years the area has transformed from a rural backwater to an economic engine of advanced manufacturing and services. It has lifted millions of people out of poverty and provided them with new homes and communities. The GBA has also become an important node in a network of megacity regions that are responsible for much of the world's economic dynamism. Yet, aspirations are higher. Government and businesses and many other want to harness the region's synergies so that the GBA can compete with other highly developed bay areas. Becoming an innovative high quality living region is the goal.

This course is designed primarily to familiarize you with the GBA because its development is important to the people that live in Hong Kong and the GBA region, because the region has a big impact on the world, and because the GBA is a model for other mega-city regions. To understand what makes this large and diverse region so successful, we focus the challenge by examining the region through the agglomeration processes of external economies, governance and urbanization. These processes led the GBA's development and will determine its future—in terms of continued economic development and more importantly in terms of the wellbeing of the GBA's people. We will examine how the GBA can function as a cohesive region, but also how the actions of the cities and the diversity of activities within the cities add vibrancy. We will also put the GBA's development in perspective, reflecting on the regional culture of the past and what other megacity regions tell us the GBA can be.

Two main objectives:

- 1) Discover more about the region you live in and whose evolution will have a great impact on your own future and quality of life.
- 2) Understand the processes of regional economic development and urbanization as they apply to the GBA and megacity regions in general.

## **Expected Learning Outcomes**

At the end of the course you should be able to:

1. Describe the various actors, institutions and natural endowments that have influenced the GBA's development.
2. Explain how key agglomeration processes have shaped economic, social and sustainable development.
3. Compare and contrast different development patterns within the GBA and the GBA with other megacities in China and elsewhere.
4. Develop individual and group research, writing and presenting skills.

## **Evaluation System**

The course is designed principally to familiarize you with the GBA so that you understand its present situation, its potential and significance. To secure that understanding you will need to know the processes driving and facilitating the development and governance of the GBA. You will be evaluated on: a knowledge of what is going on in the GBA and an understanding of why it is going on. Most of the evaluation will be done through a midterm and a final exam, both of which will be multiple choice with some short answer. You will be given numerous opportunities to answer similar MC questions in class. We will also do exercises in class that will count to participation and exam evaluation.

Students must also make a presentation to examine some issue about the GBA that is of interest to you. You can do the presentation as a group or individual, with the presentation lasting 5-7 minutes depending on group size. Besides PPT, you can also use a video, Google Earth Tour Builder or some other format. Presentations will begin in after the midterm. Final exam questions will be taken from the presentations.

75% Exams: 35% Midterm; 40% Final (2<sup>nd</sup> half topics, conceptually cumulative)

15 % Presentation

10 % In-class exercises, games, participation, quizzes/PRS

## **Readings and Supporting Materials**

A textbook for the course has been written by the instructor and can be purchased at the campus bookstore or online and can also be read online through the library. PPTs will be put on canvas before lectures if you want to print them out for note taking. Supplementary readings appropriate to each topic are on canvas and are helpful for you to broaden and deepen your understanding.

## **Electronics**

The use of electronics in class is encouraged for learning purposes, but please don't let them distract you or annoy other students. Moreover, note taking by hand on paper has been proven to be more effective in developing understanding and retention and paper is a renewable resource, supports employment and communities.

### Academic Integrity

You come to university to learn how to think and use information creatively. To do so you are exposed to and asked to search out new ideas, theories, and practices. You learn how to use them to create your own ideas, to argue their importance, and see them put into action. If you do so you will greatly enhance your career, enhance your relationships, live a more interesting life, drive a Tesla, etc. Simply copying other people's work or ideas (usually called cheating) doesn't help you develop creativity. In this course, you will learn how to extend other peoples' ideas, to use them for your own purposes and generate your own ideas. If cheating is an issue the University (therefore 'yours truly') must deal with you harshly (see: <http://www.ust.hk/vpaao/integrity/>).
